On the Scene

The house is covered in blood. A body is floating out back in the swimming pool. Was it an accident or **foul play**? When did this happen? And who is responsible? Where should investigators start?

Those are the questions crime scene investigators (CSIs) must answer. CSIs study crime scenes. They collect **evidence** to find out what happened. It's just like on a TV show, but this is real. And the science they use to do their jobs is a matter of life and death.

An investigator uses a magnifying glass to compare bullets.
